

Pure competence in air.

NOVENCO® TUNNEL JET FANS HOT SMOKE

Building & Industry

NOVENCO 

SCHAKO Group

PRODUCT FACTS

PRODUCTS

Novenco® tunnel jet fan types are available in unidirectional (AUC and AUR) and reversible (ARC and ARR) versions.

- AUC/ARC- rectangular with silencers and Novenco NovAx™ fans
- AUR/ARR- round with silencers and Novenco NovAx fans

APPLICATIONS

The fans are for ventilation of tunnels with harsh environments such as road and train tunnels, where they provide an effective way of handling polluted air and smoke.

RANGES

The Novenco tunnel jet fans are available in the following sizes.

	ØD [mm]
AUC/ARC	Ø630, Ø710, Ø800
AUR/ARR	Ø630, Ø710, Ø800, Ø1000, Ø1120, Ø1250, Ø1400, Ø1600

Internal duct diameters

CONSTRUCTION

The tunnel jet fans are tube constructions with fan casings in the middle. Silencers are mounted on both the inlet and outlet sides. The fan casing material is 3 to 4 mm thick.

All fans include suspension brackets for direct mounting to straight ceilings.

MOTORS

Dimension standard: IEC 60034

Efficiency classes: IE3

Electrical standard: IEC 60034

Enclosure: Min. IP55 in accordance with IEC 34-5 — increased protection classes available on request

Insulation: Class H

Motor flanges: B5 (standard) or B14 in accordance to IEC 34-7

Mounting: Flange

Speed control: Direct on line (DOL)

Terminal boxes: Steel boxes mounted on outside of fan casings

Terminal boxes, enclosure: IP66

Voltages: 3x400 V, 50 Hz — other voltages and frequencies available on request

NOVENCO NOVAX ROTORS

The motors are direct-coupled to the rotors, which each consist of two hub discs with cavities, in which the blades are mounted in pre-calculated angles.

MATERIALS

Blades: Aluminium alloy

Casings and motor suspension: Welded steel plate, metallic coated

Cones: Metallic coated steel sheet

Deflectors: Aerodynamic shaped aluminium wings in steel brackets

Hubs: Metallic coated steel sheet, optionally epoxy coated

Inside tube for silencers: Perforated stainless steel plate

Silencers: Metallic coated steel sheet

Sound attenuating material: Fire-proof and moisture resistant

Suspension brackets: Metallic coated steel sheet

Wire guards: Stainless steel

Other materials: Available on request, f.x. stainless steel

CLASSIFICATIONS

Balancing of rotor unit: VDI 2060, DS/ISO 21940-11:2016, balance quality grade G 6.3

Corrosion category: C3, C4 or C5

Environment: Meets the requirements for operation in industrial and coastal areas with moderate salinity according to DS/EN ISO 12944-2

Fan aerodynamic performance: DS/EN ISO 13350:2015

Flange standards: Eurovent 1/2

High temperature approvals:

Certified as F₃₀₀60, F₃₀₀120 or F₄₀₀120 class fans according to EN 12101-3 and tested for two hours at 300 or 400 °C, respectively.

Sound performance: ANSI/AMCA 300-14

Technical capacities: DS/ISO 21940-11:2016; DS/ISO 21940-14:2012; EN ISO 5801:2017

Temperature range: -20 to +60 °C

ACCESSORIES

- Adjustable deflectors on outlets
- Painted- inside, outside or both
- Safety chains
- Temperature sensors on bearings
- Temperature sensors on motor windings
- Vibration dampers
- Vibration sensors
- Wire guards on inlets

Tunnel jet fan type ARR

NOVENCO TUNNEL JET FANS

The high performance and high temperature resistant tunnel jet fans from Novenco are suitable for normal ventilation and smoke control systems in both railway and road traffic tunnels.

Novenco tunnel jet fans ventilate tunnels around the world. Here they provide energy-savings, ensure low sound levels and improve system efficiencies.

Tunnel jet fan characteristics

- Compact construction
- High efficiency
- High temperature resistance
- Low installation height
- Low sound

DESIGN

The round and rectangular designs of the tunnel jet fans are in fact very efficient shapes that consume a minimum of materials and offer optimal characteristics.

The compact designs and low installation heights are throughout the size range.

MATERIALS

The environments and harsh conditions the tunnel jet fans must work in, put high demands on the strength and quality of the fan materials. For these reasons, Novenco tunnel jet fans are mostly made of metallic coated or stainless steel sheets, and with aluminium for only the blades and deflectors. Attenuating material in the silencers is fire-proof and moisture resistant.

UNQUESTIONABLE PERFORMANCE

The thrusts and efficiencies of Novenco tunnel jet fans are designed for normal operation and with sufficient capacities to control smoke in case of a fire. The exact capacities and sizes depend on the tunnel layout as well as the standards and regulations that apply to the specific cases.

Novenco's experience with tunnel jet fan design, system layouts and calculations is long and from a wide range of projects.

RENOWNED NOVAX FAN QUALITY

All Novenco tunnel jet fans use the renowned NovAx fan design introduced by Novenco in the 1980s. This durable design is kept up to date through optimisations of the components and materials. In the 2020-update of the NovAx-based tunnel jet fans, the motors have been revised, and the silencers updated to match market requirements for performance and sound.

APPROVED FOR HIGH TEMPERATURES

The tunnel jet fans have been tested and performances confirmed in accordance to legislative requirements and standards. The fans are tested and certified for operation as EN 12101-3 hot smoke fans.

PRODUCT DESCRIPTION

FAN TYPES

The tunnel jet fans are manufactured in round (AUR/ ARR) and space-saving rectangular (AUC/ARC) designs. The designs are made in either unidirectional or reversible versions.

The impellers range in diameter from Ø630 to Ø1600 mm for round designs (AUR-ARR) and from Ø630 to Ø800 mm for rectangular designs (AUC-ARC).

FAN CASINGS

The fan casings are welded steel constructions in 3 or 4 mm metallic coated steel sheet depending on size. Alternatively, the casings can be made in stainless steel.

MOTORS

These are as standard IEC motors for 50 or 60 Hz in efficiency class IE3. Minimum protection class is IP55 with increased protection classes available on request.

ELECTRICAL CONNECTIONS

All fan designs have terminal boxes and disconnect switches on the outside of the fan casings.

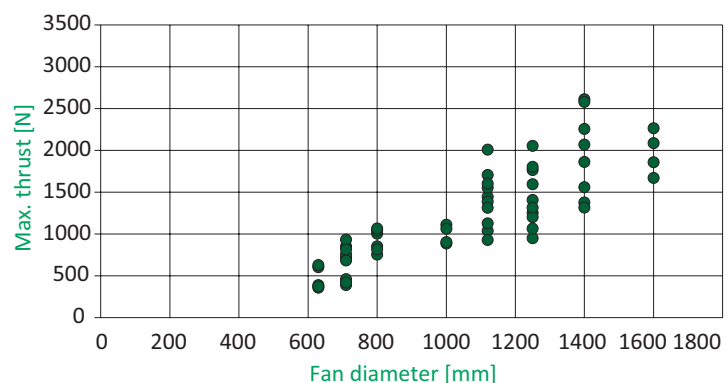

INSTALLATION

The tunnel jet fans are for ceiling installation on straight surfaces. However, brackets for other ceiling profiles are also available on request.

TEMPERATURE RANGES

The fans are for continuous operation at -20 to +60 °C and tested and certified for smoke and heat exhaust at either 300 or 400 °C during 2 hours of operation. At 400 °C, some fan sizes operate at reduced speeds.

Tunnel fan comparison chart

Tunnel jet fan comparison chart

QUALITY AND SERVICE

REST ASSURED

The NOVENCO tunnel jet fans are produced in accordance with NOVENCO's well-known quality standards. NOVENCO Building & Industry A/S is ISO certified and all fans are inspected and tested.

IMPORTANT

This document is provided 'as is'. NOVENCO Building & Industry A/S reserves the right to changes without further notice due to continuous product development.

Pictures in the catalogue may show products with accessories fitted.

The fans are designed for continuous operation. The following kinds of operation may cause fatigue break in the impellers and endanger people.

- Operation in stall area
- Operation with pulsating counter pressure – called pump mode
- Operation with exceedingly starts and steps

If in doubt, NOVENCO should be contacted to assess the suitability of the fans.

Copyright (c) 1998 - 2022
